

Cushion Tire Forklift Parts

Parts for Cushion Tire Forklift - Cushion tires are a firm tire with a smooth profile. Its' tread is bonded to a steel ring so as to shape the tire, and the tire is pressed onto a hub which is attached to the lift truck. These types of tires are perfect to use in smooth floor warehouses and are accessible in various rubber or polyurethane compounds.

Consisting of polyurethane, a poly tire is a really solid tire. These kinds of tires are used as a substitute for cushion tires whenever there is a higher load capacity than can be attained using a cushion tire and such applications which require a lower steering effort. Poly tires available in a range of hardness ratings in order to meet different particular application requirements. Narrow Aisle models and Orderpicker lift trucks would normally utilize small diameter poly tires for their outrigger load wheels.
