

Fork Positioner for Forklifts

Fork Positioner for Forklift - A fork positioner is actually an apparatus made out of high quality materials intended to be able to endure the most demanding procedures and work environments. This particular piece of equipment could enable the individual driving to maneuver the blades hydraulically without leaving the seat. Side shifting units have the extra ability to be able to laterally position the entire load or the arms in order to facilitate more precise carrying and placement in a faster and much more effective manner.

The unique blade pocket design enables the individual operating it to be able to safely sway the unit's blades without any worry of destroying the positioning cylinders. This could allow the operator the choice to either execute independent or simultaneous blade movement, depending on the requirements of the job. For most forklifts with non-OEM carriages, complete carriages are needed. Standard OEM carriages can be converted into fork positioners on existing units.
