

Remanufactured Forklift Parts

Remanufactured Forklift Part - Lift trucks are really expensive pieces of machinery. A 5000lb new electric unit can cost between \$18,000 to \$25,000 and some thousands of dollars more would be needed for a battery and a battery charger. A similar internal combustion lift truck of the same lift capacity will cost a little less and the diesel models that are capable of heavier lifting capacities could cost upwards of one hundred thousand dollars. Reconditioned lift trucks are an option in order to save much cash as they cost less than half the price of new units.

Various people think they would handle more repairs problems if they buy a reconditioned forklift and are leery of acquiring a used lift truck at a sale price. A properly reconditioned forklift would work just in addition to a new one and whichever doubts of repairs are unfounded. Although your lift will get heavy use, so long as you take good care of the machinery, it will serve your requirements and possibly save you a lot of cash.

When considering purchasing a second-hand lift truck, it is important to establish what the seller means by the term refurbished or reconditioned. Many companies do an excellent job of entirely making over the unit before reselling it. This consists of disassembling the lift truck, rebuilding the engine, sandblasting the lift and next reassembling everything and finishing with a fresh coat of paint.

To correctly and meticulously rebuild a lift truck engine, a good company would completely disassemble it. A heat cleaning system could then be used to clean all the parts. Once this step has been completed, all of the components are checked to see if they have any extensive wear, any defects or breakage. Specific components like for instance cylinder heads, crankshafts, cylinder blocks and connecting rods are resurfaced, resized and reground if considered necessary. Various parts like for instance bolts, gears, nuts et cetera. are repaired or replaced as needed.

As soon as the overhaul has been completed, the engine is rebuilt by hand. After being put back together, a series of tests are applied to the working machinery to be able to check all of the parts and be positive there are no leaks or issues. If any problems occur, the necessary alterations are done.

There should be no reason to be worried about obtaining a reconditioned or refurbished lift truck from quality sellers. The process of rebuilding the machinery guarantees the utmost in reliability. Maintenance expenses could really work out to be less because you would avoid the initial phase of higher repairs projections that a brand new forklift has as it is broken in. By following routine upkeep schedules and taking care of the equipment appropriately, a reconditioned forklift would serve you well.
